Matrix Methods 'addTo', 'subtractWith' and 'multiplyBy' use the respective static methods from BinaryOperation sub-classes. Matrix **BinaryOperation** utilise> - modulus : int # BinaryOperation () - nLines : int # loopAndPerformOperation (matrix1: Matrix, matrix2: Matrix): v... - mColumns : int # operation (operand1 : int, operand2 : int, modulus : int) : int - matrixArray : int[][] + Matrix () + Matrix (nLines: int, mColumns: int, modulus: i...

+ Matrix (matrixArray: int[][], modulus: int) + Matrix (matrix : Matrix) + Matrix (matrix: Matrix, newN: int, newM: int) + getN () : int + getM () : int + getModulus () : int + getElement (line: int, column: int): int + printMatrix () : void + addTo (otherMatrix : Matrix) : Matrix + subtractWith (otherMatrix : Matrix) : Matrix + multiplyBy (otherMatrix : Matrix) : Matrix

Addition

# operation (operand1: int, operand2: int, modulus: int): int

- Addition ()

+ add (matrix1 : Matrix, matrix2 : Matrix) : Matrix

- Subtraction () + subtract (matrix1 : Matrix, matrix2 : Matrix) : Matrix

# operation (operand1: int, operand2: int, modulus: int): int

Subtraction

+ multiply (matrix1 : Matrix, matrix2 : Matrix) : Matrix

- Multiplication ()

Multiplication

# operation (operand1: int, operand2: int, modulus: int): int
